## Introduction

The Doggy Walker 3000 is a state-of-the-art appliance designed to take the pressure off dog owners by walking their dogs for them! Sit back and relax while this hi-tech machine carries out all the jobs (and more!) that you would usually do when walking your dog.

## Dogger Walker 3000 Features

The advanced technology in the Doggy Walker 3000 means that all jobs are taken care of with its many specialised features:

- A sturdy 3-wheeled design ensures that the machine has stability with the addition of hybrid wheels enabling use on any terrain including road, gravel and uneven surfaces.
- The mechanical arm has any functions which replicate a human. It will pick up dog waste and place it in the waste disposal bin. Additionally, it will pet your dog in order to give it praise and comfort whilst also having the ability to pull the lever to dispense treats for your dog.
- A programmable timer allows you to set how long you would like your dog to be taken on a walk and can be changed at any point.
- Integrated speakers are able to project commands and praise replicating the owner's voice and subsequently, your dog feels like they are with their owner!
- So that your dog is entertained and maintains an active lifestyle, a spring mechanism will release a ball up to 100 metres so that your dog can retrieve this resulting in long term physical health for your pet.
- Another safety feature of the machine is the built-in sensor which detects movement and hazards so that the walker can be diverted and re-routed if necessary.
- 

## User Instructions:

1. In order to use your machine, you must firstly power it on by moving the switch, which is located on the left side, to the power 'on' position. Wait 5 seconds and then your walker should be ready to use.
2. Attach your dog to the extendable lead by pulling it out from the front and clipping it to the dog's collar.
3. To set the digital timer, hold down the timer button until you reach your desired time; this will activate as soon as the walk starts.
4. In order to use the voice command, you must firstly record your voice so that it can be replicated. Voice recognition is installed so simply state 'I am the owner of (then your dog's name)' and this will automatically program.
