

In **Maths** this half-term, we will initially focus on place value to secure our understanding of number. The children will use lots of pictorial diagrams to compare and order numbers up to ten million. Within this unit, the children will also cover rounding to the nearest appropriate boundary as well as exploring negative numbers. When our place value knowledge is secure, we will move on to deepening our learning of the four operations (+ - x ÷).

Geography will be the main focus for this half-term studying the diverse and unique culture and topography of Brazil. Throughout the unit, we will compare the geography of Brazil to that of the UK (an integral element of the new primary curriculum). We will begin by studying the human and physical features of Brazil before placing Brazil in the wider context of South America and the world. We will investigate the many differences between urban and rural Brazil and case study the lives of people living within Rio de Janeiro.

Our **RE** unit will help us to explore pilgrimage, with the key question: Why do people of faith go on pilgrimages? We begin by thinking about special journeys that we have made. This helps us to consider how important pilgrimage is, within the religion of Islam, to Muslim people. We will explore their rituals of Hajj - a very important journey for Muslims.

With a greater emphasis on quality texts within our **English**, we begin by exploring The Great Kapok Tree by Lynne Cherry. Using this emotive story, which highlights the issues of deforestation, we will write a diary entry in role as one of the animals, whose home is within the Kapok Tree. Children will look at the harmful effects of deforestation and this will be followed by studying a speech given by Greta Thunberg. We will look at both sides of an argument which will allow children to develop a balanced approach in order to debate the future of the rainforests.

In **Science**, the children will learn about the life processes of all living organisms. They will then explore how living things (including animals and plants) are classified into broad groups according to their common characteristics. We will think about why it is so important to be able to classify plants and animals based on specific characteristics. Linking to our jungle-based topic, we will delve into the reasons why some creatures are deadly.

PE will take place every Friday until half-term. Our personal focus as a sportsperson this term is to persevere in a game of endball. This will involve netball skills: throwing, catching and tactical moves for attack and defence.

Forest School will begin in Week 3 and is a child-led exploratory and practical session with nature. It is a chance for them to develop their sense of responsibility as well as appreciating the joy of the outdoors.

In **Art**, we will look at the work of Fernando Medeiros, a Brazilian naive artist whose paintings depict traditional themes. After completing some work in our sketchbooks about him, the children will create their own prints inspired by the artist and the Amazon rainforest.

In **Music**, the children will be exploring and identifying the characteristics of film music. They will use graphic scores to interpret different emotions in film soundtracks. Finally they will be creating their own composition and graphic score to perform alongside a film.

For **Computing**, the children will begin by learning about the history of computers. They will research computers that changed the world and create a short presentation about one before considering what they think future computers will be like. To end the unit, children will look at the features of a radio play and have a go at recording one using software called 'Soundtrap'.
